ABOUT THE CONFERENCE

The central aim of the ENCODS is to provide young neuroscientists a unique training opportunity with lectures by leading experts in the field, students presenting their results and discussing them in the scientific community, fostering international scientific exchange and collaborations already at an early stage of the career. The purpose is not only to improve the understanding of current research but more importantly to look into the future by asking what needs to be done next to advance our understanding of the brain.

AIMS

Offer immediate scientific exchange
for PhDs and leading neuroscientists

Encourage the dialogue
between scientists of different domains
in neuroscience

Discuss where we are in Neuroscience today
and what the future challenges are

Register at www.encods.eu until Jan. 3rd 2013
